fullDescriptionUnstructured: El Garzón Migratorio tiene el plumaje del cuerpo principalmente gris, el cuello café claro, la cabeza blanca con una lista ancha negra a cada lado de la coronilla; muslos castaños, pico amarillento, patas fuscas. Subespecie (azul) herodias con partes bajas grises, cuello blanco, negro y marrón; pico amarillento y piernas parduscas o verdosas. Subespecie (blanco) occidentalis se asemeja a herodias pero es totalmente blanca (algunos individuos tienen algunas plumas oscuras) (Moreales-Rozo, 2012).

identifier:

reproductionUnstructured: El Garzón Migratorio es una especie monógamo, anida en colonias en árboles altos, los nidos son construidos principalmente de palos y ramas desnudas. En Norteamérica se reproduce entre los meses de marzo y mayo; en noviembre a abril en el hemisferio sur. Las hembras ponen entre dos y siete huevos azul pálido; la incubación es realizada por ambos sexos la cual dura entre 25 a 29 días (EOL, n.d.).

behaviorUnstructured: Es una especie generalmente solitaria; casi siempre se le puede ver estática o vadeando en aguas someras (Hilty & Brown, 1986) aleteando lentamente en lo alto, aún a millas del agua (Kaufman, 2005), aunque en las zonas de anidación se le ve agrupada con más individuos. Utilizan sus largas patas para escarbar en el agua y lanza su pico para atrapar el alimento (EOL, n.d.). En época reproductiva el macho realiza diferentes exhibiciones para atraer a la hembra, realizando movimientos con las plumas de su pecho, también puede volar en círculo alrededor del nido o sacudir las ramas de un árbol para impresionar a la hembra (Alderfer et al., 2006; EOL,

n.d.). Es una especie relativamente silenciosa cuando se encuentra lejos del nido. Su llamado es un ronco crannnk (Alderfer et al., 2006). Cuando se encuentra en vuelo realiza un profunda vocalización como pregonando un fraaaajk o braaaak. En ataques de agresión vocaliza una serie de fraaaak fraaak taaaaa taaaaa, las últimas notas son más graves (Sibley, 2000).

abstract: El Garzón Migratorio es una garza muy grande, mide aproximadamente 130 cm, tiene cuello largo y esbelto. Tiene pico amarillo verdoso oscuro, cabeza y garganta blancas, área occipital y lados de la coronilla negros; cuello grisáceo, estriado al frente de negro y blanco, resto de las partes superiores y alas grises azulado, partes inferiores más o menos estriadas de negro y blanco; tibias castaño (Hilty & Brown, 1986). Es una especie ampliamente distribuida; con frecuencia solitaria, excepto alrededor de las colonias de anidación. Se para pacientemente al lado del agua, esperando para atrapar un pez (Kaufman, 2005; Sibley, 2000). Habita cerca de cuerpos de agua, incluidos ríos, bordes de lagos, pantanos, costas y playas de agua salada. Principalmente se alimenta de peces pero también incluye cangrejos, camarones, libélulas, saltamontes, ranas, salamandras, lagartos, serpientes, aves y pequeños mamíferos (EOL, n.d.; Hilty & Brown, 1986).
