habitatUnstructured: Es una especie que pasa todo el invierno en Sudamérica en bosques tropicales húmedos, cercas vivas y zonas urbanas. Durante la primavera y el otoño, el Zorzal carigrís migra hacia el sur, por el oriente de los Estados Unidos, México y Centroamérica (Lowther et al., 2001). En el verano se reproduce en latitudes altas en bosques de hoja perenne, tundra arbustiva, bosques de coníferas y zonas arbustivas altas (Taiga). Durante su migración puede visitar áreas abiertas como pastizales, cultivos, parches de bosque, bosques secundarios y matorrales, en los cuales forrajea para conseguir alimento (Hilty & Brown, 1986).

fullDescriptionUnstructured: El Zorzal Carigrís tiene plumaje por encima café oliva opaco uniforme, mejillas grisáceas, sin anillo ocular nítido, debajo blanco, pecho teñido de ante grisáceo, lados más gris y puntos negruzcos en el pecho con patas rosadas. La hembra y el macho son similares entre sí en todas las estaciones. Su tamaño varía entre 18 y 20 cm y su peso oscila entre 24 y 25 gr. Especie similares: El Zorzal de Swainson (*Catharus ustulatus*), Zorzal rojizo (*Catharus fuscenscens*) y Zorzal hermitaño (*Catharus guttatus*) (Hilty & Brown, 1986). Entre las subespecies se encuentra El Zorzal Carigrís del norte (*Catharus minimus minimus*), que se reproduce en el extremo nororiente de Siberia, Alaska y Canadá y pasa el invierno en Sudamérica (Colombia, Venezuela, Perú y Brasil), principalmente al oriente de la cordillera de los Andes (Alderfer et al., 2006). El Zorzal Carigrís del occidente (*Catharus minimus aliciae*), se reproduce en el suroriente de Canadá y pasa el invierno en las Islas del Caribe y en Sudamérica en la costa norte de Venezuela (Alderfer et al., 2006).

reproductionUnstructured: Esta especie generalmente se reproduce en una sola temporada del año (verano); sin embargo, si pierde temprano su primera nidada, es posible que haga una segunda postura. Se reproduce entre mayo y julio, la incubación es realizada por la hembra y se extiende entre 12 y 14 días. El nido es construido por la hembra, y tiene forma de taza decorada por hierbas secas, ramitas, musgo, troncos y otros materiales vegetales y algunas veces con barro (Alderfer et al., 2006). En la mayoría de los casos el nido es puesto en el suelo, o algunas veces en la base o en las ramas de arbustos. El tamaño de la nidada es entre 3 a 6 huevos (normalmente 4), de coloración azul verdoso pálido con manchas café; los juveniles son criados por ambos padres y dejan el nido a los 13 días de nacidos (Lowther et al., 2001).

feedingUnstructured: Es una especie que se alimenta principalmente de insectos y otros artrópodos, como escarabajos, hormigas, avispas, arañas y lombrices de tierra (Lowther et al., 2001). En su área de reproducción, consume arándanos, cerezas y frambuesas mientras que en el sur las sustituye por moras, bayas de sauco y otras frutas; en Panamá se ha documentado el consumo de hormigas (Hilty & Brown, 1986).

behaviorUnstructured: Es la única especie migratoria que se reproduce desde el nororiente de Siberia. Es tímida y en sus zonas de reproducción se le puede observar solitaria o en parejas forrajeando sobre el suelo y arbustos. En temporada de migración se agrupa con bandadas mixtas revoloteando en medio del sotobosque y áreas urbanas, en busca de insectos y frutos (Alderfer et al., 2006). Es una especie tímida; usualmente se observa forrajeando en sotobosque cubierto, principalmente en nivel medio o más bajo, pero arriba del suelo (Hilty & Brown, 1986). Su canto varía geográficamente. En las áreas de reproducción su canto es nasal, muy similar al del Zorzal Rojizo (*Catharus fuscescens*); pero varía entre la primera y última frase; en esta última el tono desciende, mientras que en medio el canto se eleva (Alderfer et al., 2006). También presenta un fuerte llamado Fiiiuu similar al del Zorzal Rojizo pero en un tono más agudo y ascendente. En Colombia, entre los meses de marzo y abril, se han registrados vocalizaciones, pero son muy débiles en comparación con las que realiza en sus zonas de reproducción (Hilty & Brown, 1986).

distributionUnstructured: Es una especie nativa de Norteamérica; sus áreas de reproducción se extienden desde el norte de Siberia, Alaska, Canadá hasta el nororiente de los Estados Unidos (Alderfer et al., 2006). En otoño migra hacia el sur para pasar el invierno (Cifuentes-Sarmiento, 2012).
Esta especie habita en latitudes altas, en bosques de hojas perennes y tundra ártica. En época de migración, se ha registrado hasta los 3000 msnm (en Venezuela). En Colombia como migratorio de paso, hasta los 2600 msnm (Hilty & Brown, 1986).

abstract: El Zorzal Carigrís es un ave cantora migratoria que se reproduce en Norteamérica y migra hacia el sur en el invierno (Lowther et al., 2001). Se reproduce en hábitats de dosel cerrado, con arbustos y sotobosque denso hasta el borde de la Tundra. En el trópico utiliza sitios de sotobosque espeso, zonas urbanas y cercas vivas (Hilty & Brown, 1986). Es el Zorzal más grande de Norteamérica, alcanza hasta unos 18 cm y su peso oscila entre 24 y 25 g. Tiene un rango de distribución muy amplio por lo cual no se acerca a los umbrales de especie en categoría de amenaza (Cifuentes-Sarmiento, 2012).
