reproductionUnstructured: El nido en ésta especie es semiesférico y su orificio de entrada se encuentra en un costado de la parte inferior (a diferencia del nido de P. liliacea); algunas veces de color blanco (Bequaert, 1944). Es una estructura bastante frágil por lo que debe manejarse con cuidado. Se pueden encontrar adosados a ramas de plantas leguminosas, bajo aleros de casas o cerca a carreteras. Un nido puede contener aproximadamente 7000 individuos (Richards, 1978).

interactionsUnstructured: Es una especie muy parecida a Polybia liliacea se pueden diferenciar porque P. striata tiene los costados del propodeo estrigulado y en vista lateral su primer segmento abdominal se eleva muy suavemente. Algunas avispas de la subfamilia Eumeninae de los géneros Monobia y Montezumia poseen similares patrones de coloración pero una observación cuidadosa permite diferenciarlos claramente.
