abstract: Su espalda es grisácea plumiza, la garganta es negra rodeada de blanco, el collar es negro y el resto del vientre es negro, la rabadilla y las timoneras son negras; el pico es amarillo, y las patas negras. Las hembras tienen el dorso pardo oliváceo y el vientre ocráceo. Los juveniles tienen coloración parecida a la de las hembras, pero a los dos o tres meses de vida los machos ya comienzan a tomar la coloración de los machos adultos en la zona de la

garganta (La Grotteria et al. 2011)
