habitatUnstructured: Vive en una amplia variedad de hábitats boscosos, por lo menos a 2600 msnm en los Andes, pero por lo general en áreas de menor elevación, bosques, sabanas, praderas arboladas, plantaciones con sombra, manglares y matorrales (The Cornell Lab of Ornithology, 2010); en bordes de selva y claros enrastrados en áreas húmedas; bordes de monte de galería en áreas más secas; se ve fácilmente en el Parque Nacional Natural Tayrona (Hilty & Brown, 1986). En selvas y capueras (áreas para cultivo) del norte de Uruguay (Narosky & Yzurieta, 2010).

fullDescriptionUnstructured: El Pibí Tropical mide aproximadamente 14 cm, es una especie muy similar al Atrapamosca Oriental (*Contopus virens*) y al Atrapamosca Occidental (*Contopus sordidulus*), y a veces no distinguible en campo excepto por su voz. En general más pequeño, esbelto, cola proporcionalmente más larga, partes superiores (especialmente coronilla), más oscuras, abdomen usualmente teñido amarillento y área bridal usualmente con punto grisáceo pálido o blanquecino (no conspicuo pero diagnóstico a corta distancia); por lo demás solo se puede distinguir en campo solo por su voz (Hilty & Brown, 1986).

§

Algunos ornitólogos consideran esta especie como una subespecie del Atrapamosca Occidental (*Contopus sordidulus*) y el Atrapamosca Oriental (*Contopus virens*) (The Cornell Lab of Ornithology, 2010).

behaviorUnstructured: Es una especie pasiva y confiada; se balancea al asentarse; menea levemente la cabeza mientras vocaliza (Narosky & Yzurieta, 2010). El Pibí Tropical se posa vertical y solitario a nivel medio o más bajo, hace largos vuelos, con frecuencia regresa a la percha original (Hilty & Brown, 1986).

Un silbido fuit fuit fuit y sonoro piui (Narosky & Yzurieta, 2010). También tiene un llamado como un tirrip o triii o variaciones similares suaves, cortas y ligeramente trinado. Al amanecer vocaliza una serie repetida de uuuu variables a un uiiii yii bajo, a veces gorjeado (Hilty & Brown, 1986).

distributionUnstructured: El Pibí Tropical está ampliamente distribuido en gran parte de Mesoamérica, desde el sur de México hasta el sur y gran parte de Sudamérica principalmente en la región amazónica (The Cornell Lab of Ornithology, 2010); norte de Argentina, Paraguay y sur de Brasil (Hilty & Brown, 1986). En Colombia en la Costa Pacífica en Chocó (Nuquí), región de Santa Marta; sur puntualmente hasta el valle medio de Magdalena; en la cordillera Oriental; Norte de Santander, Sabana de Bogotá y a lo largo del costado este de la cordillera Oriental hasta el sur de Caquetá (sur de Florencia) (Hilty & Brown, 1986).
El Pibí Tropical se distribuye generalmente hasta los 1000 msnm (errante a mayor elevación); ocasionalmente entre los 1800 y los 2600 msnm (cordillera Oriental) (Hilty & Brown, 1986).

abstract: En general el Pibí Tropical es marrón grisáceo, con partes superiores más oscuras (The Cornell Lab of Ornithology, 2010). Es más pequeño y esbelto que los Atrapamoscas Oriental (*Contopus virens*) y Occidental (*Contopus sordidulus*), cola proporcionalmente más larga, partes superiores (especialmente coronilla) más oscuras (Hilty & Brown, 1986). Vive en una amplia variedad de hábitats boscosos, por lo menos a 2600 msnm en los Andes, pero por lo general en áreas de menor elevación (The Cornell Lab of Ornithology, 2010); en bordes de selva y claros enrastrados en áreas húmedas (Hilty & Brown, 1986). Es una especie insectívora y como otras especies de atrapamoscas se posa en perchas donde vuela para cazar insectos y vuelve de nuevo a la misma percha (The Cornell Lab of Ornithology, 2010; Hilty & Brown, 1986). Es una especie común y con un alto rango de distribución donde habita; la tendencia de la población es cada vez más estable (BirdLife International and NatureServe, 2014).
