fullDescriptionUnstructured: Longitud 18-20 cm. Pico amarillento opaco con extremo negro; patas amarillo opaco. El plumaje de los individuos no reproductivos es café oliva por encima, blanco debajo con superciliar blanquecina y borrón pardusco en lados del pecho. Los individuos en condición reproductiva tienen el plumaje similar pero difusamente barrado negruzco por encima y densamente punteado de negro debajo (puntos redondos grandes) (Hilty y Brown 2001).

behaviorUnstructured: Es un ave migratoria boreal (Salaman et al. 2009). Por su coloración es inconspicua y no social; sus individuos se distribuyen uniformemente en su hábitat y no forman bandadas, muy rara vez se asocia con otros andarrios (Hilty y Brown, 2001).  
Piit o piit-uit-uit, a menudo el primer signo de su presencia (Hilty & Brown, 2001).

abstract: Ave pequeña, de 18 a 20 cm de largo, con patas cortas amarillentas, y pico naranja con un punto negro. El color de su plumaje es pardo verdoso en el dorso, con la parte inferior clara, que se vuelve muy manchada durante el verano; las hembras tienen manchas más grandes y más negras (Hilty y Brown 2001).
