fullDescriptionUnstructured: Ave de 14 cm. de longitud. Es muy parecido al Vireo olivaceus pero su pico es ligeramente más grande, presenta estrecha lista malar de color negro. Su plumaje es por encima color verde oliva, la coronilla es de color gris a gris pardusco; el superciliar es blanquecino bordeado por debajo por una lista ocular negruzca; las partes inferiores del cuerpo son blanquecinas teñidas de color oliva amarillento en los flancos. La coloración de los individuos inmaduros es más ante y más opaco y con una lista malar pardusca (Hilty y Brown 2001).

reproductionUnstructured: Los nidos son ubicados en las bifurcaciones de ramas de árboles de 1,5 a 2,4 metros de altura; el nido es una taza profunda construida de hierba, líquenes y telas de araña; algunas veces se usan otros materiales como fibras de alfombra y plumas moteadas de pato, e hilo de pesca nylon. Se ponen dos o tres huevos blancos manchados de marrón, púrpura y negro. Pocos detalles se conocen sobre la biología reproductiva de esta especie, tales como la incubación y salida del nido y el número de crías (Sotoccardo 2003).

dataType:

identifier:

behaviorUnstructured: Es una especie solitaria (Elizondo, 2000). Los adultos son muy agresivos a los intrusos en su territorio de anidación (Sotocardo 2003). Su canto es similar al del Verderón ojirrojo, consistente de una a cuatro notas (usualmente tres), fuertemente acentuadas; no se ha registrado el canto en Colombia (Hilty y Brown 2001).
