habitatUnstructured: Esta especie forrajea en pequeños grupos en bancos de lodo con pasto esparcido, charcos en potreros anegados, praderas, marismas, campos inundados, áreas abiertas húmedas y bordes de humedales, ocasionalmente se observa en playas y planos lodosos de la costa, ríos y lagunas (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986). Las zonas de anidación son la tundra y por lo general en las franjas de vegetación alrededor de los humedales (Alderfer et al., 2006; Canevari et al., 2001).

fullDescriptionUnstructured: El Correlimos Pechirrayado es el playero más grande que la mayoría de las especies del género. Tiene un tamaño entre 20 y 23 cm, cuello proporcionalmente largo, pico corto y ligeramente decurvado, patas amarillo verdoso y una marcada separación del color del pecho con respecto al blanco del abdomen (Canevari et al., 2001). Por encima fuertemente estriado de negro; cabeza, cuello y pecho ante estriado café en fuerte contraste con partes inferiores blancas. En vuelo muestra una barra alar blanquecina y centro negro ancho en rabadilla y cola (Canevari et al., 2001). En época reproductiva muestra algunas plumas de la cabeza y el dorso con estriado negruzco y canela (Alderfer et al., 2006; Kaufman, 2005).

reproductionUnstructured: Su temporada reproductiva inicia a finales de mayo y principios de junio. Tiene un sistema de apareamiento promiscuo, los machos se aparean con varias hembras sucesivamente y estas visitan los territorios de varios machos para aparearse (EOL, n.d.; Kaufman, 2005). La hembra incuba los huevos durante cuatro días, los pichones dejan el nido y la mayoría de veces el macho abandona el área de reproducción, la hembra se mantiene con el juvenil hasta que empieza a volar, alrededor de los 21 días (EOL, n.d.; Farmer et al., 2013).

behaviorUnstructured: Es una especie pasiva, por lo general se puede observar solitario o en pequeños grupos forrajeando sobre bancos de lodo con pasto y bordes de humedales; cuando se levanta vuela en zigzag como la Caica (*Gallinago nobilis*) (Asociación Bogotana de Ornitología, 2000).

Su reclamo un *yrk!* o *dsrrt!* vibrante y ronco al que le agrega notas *dsrrt-d'yrtr* en staccato durante el vuelo, también un meloso *chriit* (Kaufman, 2005). En las zonas de parada y de migración es común escuchar una serie de vocalizaciones como *prrip prrip* que realiza cuando aterriza o sale en vuelo, igualmente un *tr'r'r'k* o *ch'r'r't'* áspero y raspante cuando se encuentra con otros playeros (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986). En cortejo da unas vocalizaciones graves *ju's* (Farmer et al., 2013).

distributionUnstructured: Es una especie migratoria de larga distancia; se reproduce en el círculo polar ártico en Siberia y Norteamérica (Alaska y Canadá), desde la península Yamal, en el oeste de Rusia hasta la bahía de Hudson. Transeúnte en Centroamérica, Antillas Mayores y Menores, Trinidad y Tobago, Colombia, Venezuela y Ecuador (Alderfer et al., 2006). Frecuenta pantanos, planicies con pasto, campos inundados, charcos desde el nivel del mar hasta los 3100 msnm (Asociación Bogotana de Ornitología, 2000; Ruíz-Guerra, 2012). Residente de invierno en Perú, sur de Bolivia, sur de Brasil y norte de Argentina y Uruguay hasta el centro de Chile (Narosky & Yzurieta, 2010).

abstract: El Correlimos Pechirrayado es una especie de playero migratorio boreal. El nombre griego Kalidris fue aplicado por Aristóteles a un ave de orilla, el nombre de la especie proviene del griego melas = negro y notos = espaldar, para describir detalles del plumaje. Se reproduce en el círculo polar ártico en Siberia y Norteamérica (Alaska y Canadá), desde la península Yamal, en el oeste de Rusia hasta la bahía de Hudson. Transeúnte en Centroamérica, Antillas Mayores y Menores, Trinidad y Tobago, Colombia, Venezuela y Ecuador. Residente de invierno en Perú, sur de Bolivia, sur de Brasil y norte de Argentina y Uruguay hasta el centro de Chile (Canevari et

al., 2001). Más grande que la mayoría de las especies del género, mide entre 20 y 24 cm, el plumaje por encima café oscuro listado con café claro, con dos listas anchas anteadas a lo largo de cada lado del dorso (Canevari et al., 2001). Generalmente habita en bordes de cuerpos de agua, potreros y charcos donde busca su alimento (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986).
