fullDescriptionUnstructured: La Iguasa Común mide entre 51 a 56 cm y puede llegar a pesar 1000 g. Tiene pico naranja, patas largas naranja rosa; su plumaje es principalmente café rufescente; lado de la cabeza y alto cuello y pecho café grisáceo; pecho y vientre negro. En vuelo, alas negras encima y debajo con gran parche blanco en el hombro. Los juveniles tienen un plumaje mucho más opaco y más gris; aunque siempre con el patrón del adulto; pico y patas negruzcas. Vuela con el cuello hacia abajo, la patas se proyectan más allá de la cola (Hilty & Brown, 1986).

reproductionUnstructured: La mayor temporada reproductiva ocurre entre mayo y junio en particular para Norteamérica (Texas) (Alderfer et al., 2006; EOL, n.d.), pero en Sudamérica se tienen registros para los meses de septiembre y octubre (Venezuela) y para Abril a Agosto y diciembre a Febrero en Colombia. Anida en árboles huecos que estén cerca a pantanos o campos inundados (Hilty & Brown, 1986). La hembra pone entre 9 a 18 huevos; la incubación es realizada por ambos sexos y dura entre 25 a 30 días; los juveniles son criados por ambos padres y a los 60 días el juvenil vuela por primera vez (EOL, n.d.).

behaviorUnstructured: Es una especie gregaria, suele llegar a formar por épocas bandadas de más de 2000 individuos (McNish, 2007), es bastante activo durante el día, pero también es común que presente actividad nocturna (Kaufman, 2005); es frecuente observarla durmiendo en ramas de árboles, especialmente en ramas altas y muertas, aledañas a lagos y lagunas (Hilty & Brown, 1986). Aparentemente estos patos presentan movimientos locales asociados al estado de inundación de los humedales de la región (Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010). Los machos se atacan unos a otros persiguiéndose y mordiéndose, con exhibiciones de amenaza que implican estirar el cuello hacia adelante y abrir el pico (EOL, n.d.).

Su reclamo es un pi ji, pi ji ji ji ji ronco de 4 a 6 sílabas, a menudo lo realiza cuando está en vuelo (Hilty & Brown, 1986; Kaufman, 2005). También vocaliza un débil iiiiip en serie o un solo silbido (Sibley, 2000).

distributionUnstructured: La Iguasa Común se distribuye desde la Costa Pacífica del sur de Texas y sur de Florida (Kaufman, 2005), México hasta el oeste de Ecuador, Perú, Bolivia, norte de Argentina, Paraguay y el sureste de Brasil; Trinidad y Puerto Rico (Alderfer et al, 2006; Hilty & Brown, 1986). En Colombia se distribuye en los litorales del Caribe y Pacífico, valles altos de los ríos Cauca y Magdalena, Amazonia y Orinoquia; desde el sur de Boyacá hasta el sur de los departamentos del Meta y Vaupés (Castillo-Cortés, 2012).

Se registra desde el nivel del mar hasta los 2600 msnm (Sabana de Bogotá) (Hilty & Brown, 1986).

abstract: La Iguasa Común es un pato robusto café, con pecho y abdomen negro, pico y patas rosadas. En vuelo muestra sus alas negras con grandes parches blancos (Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010); es la única especie de iguasa que tiene blanco en las alas; se distingue en vuelo de otros patos por su aleteo más lento y en forma de ganso (Hilty & Brown, 1986). Es frecuente observarla durmiendo en ramas de árboles aledaños a lagos y lagunas (Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010), generalmente en grupos pequeños, es una especie activa de día o de noche (Hilty & Brown, 1986). Presenta varios llamados, pero el más común es un silbido uii iiii que realiza principalmente en vuelo (Hilty & Brown, 1986; Sibley, 2000). Es una especie con un amplio rango de distribución y la tendencia de la población es de incremento; por lo tanto la Iguasa Común no se acerca al umbral de vulnerabilidad (BirdLife International and NatureServe, 2014).
