habitatUnstructured: Habita en áreas abiertas, montes claros y bordes de bosque, plantaciones y matorrales (Eusse-González, 2012); en sus zonas de reproducción se encuentra en sicomoros grandes a lo largo de los arroyos (Kaufman, 2005). En las zonas de invernadas es común verla en sobre el dosel y el sub-dosel de boques secundarios, bordes de bosques nativos o plantaciones de eucalipto o árboles en parques o fincas (Asociación Bogotana de Ornitología, 2000).

fullDescriptionUnstructured: El Atrapamoscas Sulfurado tiene pico grueso, listado oscuro prominente y cola rufa. Los adultos tienen el dorso café anteado, listado negruzco grueso y borroso y una mancha grande amarilla dorada oculta en la coronilla; alas negruzcas, con bordes canela en los hombros y el borde grueso de las coberteras medianas y mayores y de las secundarias ante pálido; listas blancuzcas por encima y por debajo con el área loreal y auriculares negruzcos; garganta blanca, barbilla y área malar con abundante listado que puede llegar a ser fusco uniforme y el centro de la garganta ligeramente listado; resto de la región inferior amarillo pálido con abundantes listas negruzcas en el pecho y el costado. Pico negruzco, base de la mandíbula rosada y patas fuscas. Los juveniles son semejantes pero sin amarillo en la coronilla y con el dorso más brillante, las coberteras alares con borde rufo (Eusse-González, 2012).

behaviorUnstructured: Esta especie pasa mucho tiempo en niveles medios o altos en los árboles; pero a veces muy bajo. Es una especie solitaria o en parejas y más bien inconspicua excepto cuando llama. Captura insectos grandes en vuelos cortos a follaje o ramas (Hilty & Brown, 1986).

Con frecuencia es ruidoso; emite un fuerte dit (simple o repetida); también un áspero fichup; al amanecer y al atardecer hace un juiiiit sidle juit chillado y ligeramente musical (Hilty & Brown, 1986). En zonas donde se reproduce vocaliza un agudo y penetrante kizihí como de un juguete de hule (Asociación Bogotana de Ornitología, 2000; Kaufman, 2005; Sibley, 2000).

distributionUnstructured: Esta especie se distribuye desde el sureste de Arizona y noreste de México hasta el sur de

Costa Rica. En Costa Rica es común en el norte de las dos vertientes hasta los 2000 msnm. Inverna principalmente en el este de Colombia, Perú y Ecuador, oeste de Brasil y en el norte de Bolivia (Eusse-González, 2012). En Colombia se distribuye en los departamentos de Bolívar, Cesar, Magdalena, Antioquia, Valle del Cauca, Cauca, Tolima, Huila, Cundinamarca, Boyacá, Santander, Caquetá y Putumayo (Eusse-González, 2012). Entre los 400 msnm y los 2600 msnm (Hilty & Brown, 1986).

abstract: El Atrapamoscas Sulfurado mide 21 cm aproximadamente, casi del tamaño de un Tyrannus pero fácilmente distinguible por su patrón fuertemente listado. El plumaje de los adultos es por encima café encendido, rayado con negruzco, perche de amarillo en el centro de la coronilla (generalmente oculto); rabadilla y cola extensamente rufas, frente, ceja ancha y lista debajo de la cara, blancas teñidas con amarillo; barbilla, bigotera gruesa negruzcas; garganta y pecho superior blancos, pasando a amarillo claro en el abdomen, el pecho y los costados gruesamente listados con negro. Pico negro, excepto la base de la mandíbula rosada (Asociación Bogotana de Ornitología, 2000). Este Atrapamoscas habita en áreas abiertas, montes claros y bordes de bosque, plantaciones y matorrales (Eusse-González, 2012); tiene una voz fuerte pero con frecuencia se sienta silenciosamente en el follaje; fácilmente se pasa por alto (Kaufman, 2005). De igual manera se alimenta de insectos, pero también consume frutas y semillas (EOL, n.d.; Hilty & Brown, 1986). Tiene un amplio rango de distribución; la tendencia de la población es estable, por lo tanto se encuentra en categoría de Preocupación Menor (BirdLife International and NatureServe, 2014).
