fullDescriptionUnstructured: La Tangara Enmascarada tiene ojos rojos, coronilla y nuca azul pálido brillante, con extensa máscara negra; encima azul pardusco opaco con baja espalda y rabadilla azul pálido; alas y cola marginadas de azul; partes inferiores ante vicuña (hace referencia al color del pelo canela claro). La hembra es similar pero más opaca, especialmente en la coronilla (Hilty & Brown, 1986).

modified: created: mimeType: dataType: identifier:

behaviorUnstructured: Es una especie pasiva; recorre hojas, ramas y frutales (Narosky & Yzurieta, 2010). Solitario o en parejas, busca activamente insectos o frutos en las ramas de los árboles hasta el dosel y/o arbustos; captura insectos en el aire; raramente se une a otras bandadas mixtas; vuelo más veloz que en Tangara (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986). En la Sabana de Bogotá generalmente se ven individuos solos, a veces parejas (Asociación Bogotana de Ornitología, 2000).

Normalmente silencioso; ocasionalmente emite un reclamo suave sip (Asociación Bogotana de Ornitología, 2000). Canta una serie chillona y poco musical de notas (poco frecuente) (Hilty & Brown, 1986).

distributionUnstructured: La Tangara Enmascarada se distribuye desde Colombia, norte y sur de Venezuela; sur de los Andes hasta Bolivia; norte de Argentina y sur de Brasil (Hilty & Brown, 1986). En Colombia se encuentra en las tres cordilleras (registros dispersos; vertiente Pacífica sólo en el Valle y Nariño) (Hilty & Brown, 1986). Es una especie poco común en la Sabana de Bogotá, donde fue registrada en la zona rural de Tenjo, Subachoque, Parque del Chico, el Jardín Botánico y la Universidad Nacional; probablemente es un visitante irregular de las elevaciones menores hacia el occidente, donde ha sido encontrado frecuentemente en Pedro Palo y la parte baja de Chicaque (Asociación Bogotana de Ornitología, 2000).

En Colombia principalmente entre 1200 msnm y 2500 msnm, ocasionalmente hasta 3000 msnm (Asociación Bogotana de Ornitología, 2000).

está tangara se identifica con facilidad por su máscara negra ancha combinado con el pecho leonado. El macho tiene la coronilla y la nuca azul contrastando con la máscara; dorso, alas y cola negro azulado opacos, los márgenes de las alas y cola azul grisáceos, rabadilla azul. Por debajo ante leonado encendido. Ojo rojo, contrastante; pico y patas negros. La hembra tiene el patrón similar pero con colores más opacos, por encima más grisácea en general con la máscara menos contrastante; por debajo ante más pálido y grisáceo (Asociación Bogotana de Ornitología, 2000). Habita en áreas abiertas o matorrales con árboles y arbustos esparcidos, como

bordes de potrero, setos vivos, parques y jardines (Asociación Bogotana de Ornitología, 2000). También se encuentra en estratos medios y altos en yungas (selva de montaña), selvas y capueras del norte (Argentina) (Narosky & Yzurieta, 2010). Esta especie tiene un rango amplio de distribución; la tendencia de la población es estable, por lo cual se considera en Preocupación Menor (BirdLife International, 2012).
