modified: created: mimeType: dataType: identifier:

habitatUnstructured: Por ser una especie de ave acuática, se encuentra en humedales de sabana, lagos, estanques, algunos cuerpos artificiales, como gravilleras abandonadas, reservorios de cultivos, entre otros. Esta muy asociada a especies de vegetación flotante como la lenteja de agua (Lemna sp), helecho de agua (Azolla filiculoides) y el buchón cucharita (Limnobium laevigatum) (Asociación Bogotana de Ornitología, 2000). Busca sitios con una buena proporción de material vegetal y también con espacios de espejos de agua (Asociación Bogotana de Ornitología, 2000; Cadena, 2002; Hilty & Brown, 1986).

behaviorUnstructured: Pueden verse en parejas o en grupos, en algunas ocasiones numerosos. Parecen formar pequeños territorios en parejas en épocas de reproducción, y es defendido activamente por ambos. Es bastante tímida, y es relegada fácilmente por otros rálidos que comparten hábitat con ella (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986; Restall et al., 2006).

Emite una serie de vocalizaciones que consisten en cortos graznidos roncos similares a otros rálidos. En comportamientos agresivos emite un tap tap tap , seguido por una fuerte carcajada ja ja ja. Cuando se encuentra en pareja, emite duetos en el que uno de los individuos emite un ka ka ka ka agudo y fuerte, mientras el otro hace unos sonidos nasales bastante graves. En ocasiones también realiza sonidos con el pico, que son de corta duración y bastante rápidos (Asociación Bogotana de Ornitología, 2000).

distributionUnstructured: La Tingua moteada está presente en Sudamérica, pero presente una distribución discontinua (BirdLife International and NatureServe, 2014). Desde Perú, hasta Argentina y Chile, también desde Brasil hasta Uruguay, y en Colombia, solo se encuentra en la Sabana de Bogotá (Asociación Bogotana de Ornitología, 2000; BirdLife International and NatureServe, 2014). Esta última está reconocida como una subespecie endémica (G. m. bogotensis), y solo se observa en todo el altiplano Cundiboyacense, ubicado en la Cordillera Oriental (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986).

Esta especie se encuentra desde el nivel del mar hasta los 3100 msnm. Las poblaciones que habitan más al sur, habitan en ecosistemas de tierras bajas. (BirdLife International and NatureServe, 2014). En Colombia, la subespecie (G. m. bogotensis) se encuentra entre los 2500 hasta 3100msnm (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986; Restall et al., 2006).

para caminar sobre la vegetación que crece en lagos y humedales, allí busca alimento por medio del forrajeo intensivo comiendo platas e insectos (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986). Posee un pico muy llamativo verde lima, la cara y la coronilla son negro y el resto de la cabeza, cuello, pecho, y parte de la espalda gris pizarra, rabadilla, espalda y supracaudales café oliva. Parte del vientre y flancos café densamente moteados de blanco, el resto del vientre y las plumas infracaudales blancas, con las patas verdosas (Asociación Bogotana de Ornitología, 2000; Cadena, 2002; EOL, n.d.; Hilty & Brown, 1986; Restall et al., 2006).
