habitatUnstructured: En su época reproductiva esta especie utiliza zonas de bosques primarios o secundarios, caducifolios o de coníferas más árboles caducifolios. Durante la migración pueden utilizar gran variedad de hábitats, como zonas urbanas bien arborizadas, parques metropolitanos, humedales, bordes de bosque, plantaciones, manglares y bosques. A pesar de tener tolerancia a ambientes urbanos, prefiere lugares que tengan árboles nativos (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006; Restall et al., 2006).

fullDescriptionUnstructured: Partes bajas inferiores blancas, de resto por encima y por debajo blanco con estriado negro, mejillas negras. El macho tiene la cabeza listada gruesamente de blanco y negro, y listado más fino por encima y por debajo. Garganta negra, dos barras alares blancas, y listado blanco y negro en coberteras infracaudales. La hembra es similar pero con las mejillas y el pecho blanquecinos y es menos rayado. También presenta las dos barras blancas en las alas y las márgenes de las puntas del ala grises. Los machos jóvenes, similares a las hembras pero con café a cambio del negro. (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006; Hilty & Brown, 1986; Peraza et al., 2012).

reproductionUnstructured: Luego de que los machos establecen el territorio y han realizado el despliegue del cortejo, la hembra empieza la búsqueda por un lugar para construir el nido. Usualmente construyen el nido en el
suelo o en alguna cavidad escondida, en zonas como la base de un árbol o roca, o una rama caída de un árbol. El
material del nido son hojas y pasto seco, y tiene forma de taza. Los huevos son blancos crema o azul pálido con
pecas cafés. Ponen entre 4 y 6 huevos, que duran incubando máximo 12 días (Alderfer et al., 2006; Restall et al.,
2006).

modified: created: mimeType: dataType: identifier:

behaviorUnstructured: Esta especie es forrajeadora activa, busca alimento en el follaje y la corteza de los árboles. Estas reinitas son muy agresivas durante la temporada reproductiva, y expulsan individuos tanto de la misma especie como de otras de otras especies. Luego de la migración de primavera, los individuos regresan e inmediatamente establecen su territorio para defender. Posteriormente comienzan el cortejo, que consiste en percharse y aletear las alas (Alderfer et al., 2006). Durante la invernación es común verla solitaria, aunque en ocasiones está asociada a bandadas mixtas. Probablemente el comportamiento territorial se extienda a la temporada de migración, y en las bandadas desplace a individuos de su misma especie (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006).

En su estadía en Colombia consta de un siiiii muy agudo, en su época reproductiva el macho canta un weesy weesy repetitivo y monótono(Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006).

distributionUnstructured: Su distribución comprende casi todo Canadá y el oriente de Estados Unidos donde anida, luego realiza una migración y puede invernar en todo Centroamérica y el Norte de Sudamérica, hasta el occidente de Ecuador. En Colombia se distribuye en toda la parte norte del país, dejando por fuera de su rango a toda la Amazonía, Orinoquía y parte de la región Pacífica (Asociación Bogotana de Ornitología, 2000; BirdLife International and NatureServe, 2014).

Se distribuye desde el nivel del mar hasta los 2900 msnm (Asociación Bogotana de Ornitología, 2000; Peraza et al., 2012).

relatedTo: measurementRemarks: measurementMethod: measurementDeterminedDate: measurementUnit: measurementAccuracy: measurementValue: measurementType: measurementID: abstract: Esta especie es una reinita única en su género, de tamaño mediano entre las reinitas, pero pequeño a comparación de otros Passeriformes. Con patrón de plumaje blanco y negro, que se caracteriza por trepar troncos de árboles y por tener una vocalización muy aguda y repetida. Tiene la garra de atrás más larga y las piernas más pesadas que otras reinitas, lo que le ayuda a trepar troncos. Tienen alas largas, cola corta, pico ligeramente curveado en la punta y relativamente largo y cabeza plana (Asociación Bogotana de Ornitología, 2000; Alderfer et
