habitatUnstructured: La Tangara Escarlata en época reproductiva prefiere los bosques caducifolios maduros y bosques caducifolios mixtos de coníferas en el este de Norteamérica. Anidan en robles, pino-encino, roble-nogal y los bosques de abeto. En Canadá que a veces se extienden hasta los bosques boreales en rodales de álamo y el abedul. Durante la primavera y el otoño que utilizan hábitats de bosques similares, así como los espacios abiertos como parques y jardines. Cuando llegan a la costa sur de los Estados Unidos a principios de la primavera se alimentan en la vegetación arbustiva, campos de hierba, y en el suelo (Alderfer et al., 2006; EOL, n.d.). En migración busca áreas arboladas aunque puede verse en bosques, parques arbolados, jardines entre otros (Asociación Bogotana de Ornitología, 2000; EOL, n.d.).

reproductionUnstructured: Los machos establecen el territorio de anidación, y las hembras son las que construyen el nido con la utilización de una diversidad amplia de hierbas secas y es elaborado a unos 15 metros de altura. Coloca entre 3 y 5 huevos, ligeramente azulados con manchas castaño o rojizas. Los huevos eclosionan entre los 12 a 14 días, y los polluelos nacen con ojos cerrados y piel anaranjada (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006; EOL, n.d.).

En migración puede unirse a otras especies para realizar el viaje, y en los lugares de parada, se agrupan hasta unos 50 individuos, para hacer un forrajeo intenso y continuar el viaje (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006; EOL, n.d.). Hembras y machos en las zonas reproductivas emiten una serie de 3 a 4 sonidos burbujeantes cortos y pausados (EOL, n.d.). En época migratoria es poco vocal y solamente se reconoce un corto reclamo chip-bur (Asociación Bogotana de Ornitología, 2000). ancillaryData

distributionUnstructured: Se distribuye en el oeste de Norteamérica, que corresponde a su área de reproducción. En su época de migración ocupa áreas a lo largo de Centroamérica, especialmente sobre áreas más cercanas al Caribe. Así mismo también utiliza las islas de Caribe. En Sudamérica a lo largo de los Andes y la costa Caribe y Pacífica solamente en Colombia, hacia el sur se estrecha la distribución limitada por los Andes y el piedemonte oriental del mismo (Asociación Bogotana de Ornitología, 2000; Alderfer et al., 2006; BirdLife International and NatureServe, 2014; EOL, n.d.; S. Tello, 2014). En Colombia es un migratorio de paso, y puede verse en toda la zona andina y algunas zonas en el piedemonte llanero. No se distribuye en la Orinoquía ni en la Amazonía (BirdLife International and NatureServe, 2014; S. Tello, 2014). Se distribuye desde el nivel del mar hasta los 2600msnm (Asociación Bogotana de Ornitología, 2000).
