Por tener una amplia distribución altitudinal puede encontrarse en bosques tropicales, andinos, altoandinos y páramo, siempre asociado a vegetación nativa donde forrajea su alimento. También puede observarse frecuentemente sobre los bordes de los bosques donde puede encontrar más fácilmente alimento (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986).

fullDescriptionUnstructured: Mide aproximadamente 14 cm de longitud, presenta la maxila negra y mandibular rosada. Por encima es verde oliva con las alas y cola café, con dos barras alares muy características, así como los bordes de las plumas de las alas blanco o anteado. Por delante principalmente gris con algunos tonos verde pálido. Tiene un anillo ocular blanquecino y delgado, muy útil para la identificación (Asociación Bogotana de Ornitología, 2000; EOL, 2014; Hilty & Brown, 1986).

modified: created: mimeType: dataType:

identifier:

behaviorUnstructured: Es una especie bastante sigilosa, sin movimientos fuertes ni desplazamientos llamativos. Consume frutos y pequeños insectos que caza con maniobras dentro del bosque. Generalmente se observa solitaria, en ocasiones en parejas. En las primeras horas del día puede ser bastante vocal, lo que hace fácil su ubicación (Asociación Bogotana de Ornitología, 2000; BirdLife International and NatureServe, 2014; EOL, 2014; Hilty & Brown, 1986).

Tiene un reclamo bastante agudo y alargado, pausado y muy claro, que es útil para su identificación y ubicación. Adicionalmente tiene un canto corto y poco elaborado, constituido por una sola sílaba, algo ronco, que emite repetidamente. Es una de las aves más vocales en las primeras horas del día (Asociación Bogotana de Ornitología, 2000).

mimeType: dataType: identifier: distributionUnstructured: Se distribuye desde la parte centro de Centroamérica, desde Guatemala, hasta la zona media de Panamá, después de un vacío en la zona de las zonas bajas del oriente de Panamá, noroccidente de Colombia; la especie vuelve a ocurrir en la zona andina de Colombia y Venezuela. En Colombia, se encuentra en las tres cordilleras, pero con una distribución más amplia en la Oriental, en la cordillera Occidental solamente hasta el Valle del Cauca. Llega hasta los límites con Venezuela en Norte de Santander. Por otro lado, en Colombia, existen otras dos poblaciones que se encuentran aisladas y que se distribuyen, una en la Sierra Nevada de Santa Marta y otra en la Serranía del Perijá (Asociación Bogotana de Ornitología, 2000; BirdLife International and NatureServe, 2014; Hilty & Brown, 1986).

Se distribuye entre los 1500 y 3000 msnm, sobre la franja de bosques húmedos tropicales, andinos y altoandinos, sin embargo puede ocurrir desde los 900 hasta los 3600 msnm en bosques secos en las partes más bajas, subparámos y páramos en elevaciones mayores (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986).

abstract: Es un ave pequeña de 14 cm que habita en bosques en donde forrajea especialmente frutos y algunos insectos. Es poco llamativa, muy sigilosa y silenciosa, en algunas horas de la mañana suele vocalizar bastante, aun así no es fácil de observar. Tiene la cabeza muy redonda verde oliva igual que toda la espalda, con las alas y la cola café, con dos barras alares y los bordes de las plumas de las alas anteadas. Desde la cara en toda la parte ventral hasta el vientre es gris teñido de verde. Tiene anillo ocular bastante delgado, pero notorio. Característico de su género la mandíbula rosada. La Elaenia Montañera, es una especie consumidora de frutos dentro del bosque alto andino y matorrales nativos. Generalmente solitaria, poco activa, pero bastante fácil de reconocer por su característico canto (Asociación Bogotana de Ornitología, 2000; EOL, 2014; Hilty & Brown, 1986).
