feedingUnstructured: El Garrapatero Grande se alimenta generalmente de insectos, pequeños vertebrados, lagartos
y ranas (Hilty & Brown, 1986). En las zonas suburbanas se observa acompañando al ganado, posado en su lomo
para alimentarse de garrapatas, parásitos o de los insectos que vuelan cuando el ganado explora el pasto; de allí
proviene el nombre de garrapatero (Hilty & Brown, 1986).

identifier:
behaviorUnstructured: Es gregario en grupos de 4 a 100 individuos o más (Hilty & Brown, 1986), también se puede
observar acompañado de grandes mamíferos (McNish, 2007). Se posa a baja altura normalmente cerca de cuerpos
de agua, pero ocasionalmente con marchas de hormigas bien en interior de selva, o a lo largo de carreteables, pero
no está asociado con hormigas (Hilty & Brown, 1986); y es el más esquivo de los demás garrapateros (Narosky &
Yzurieta, 2010). En algunas regiones de distribución es una especie migrante estacional (Asociación Bogotana de
Ornitología, 2000).
Es una especie muy ruidosa, realiza sonidos electrónicos extraños; incluyendo gorgoreos guturales como un cro
coro repetido rápidamente en coro (sonido de agua hirviendo en una tetera). También vocaliza un gruñido
prolongado reptiliano y una variedad de gruñidos (Narosky & Yzurieta, 2010), siseos y zumbidos (Hilty & Brown,
1986).

distributionUnstructured: El Garrapatero Grande se distribuye desde el sur de Estados Unidos y Costa Rica hasta el oeste de Ecuador y el norte de Argentina (Asociación Bogotana de Ornitología, 2000). En Colombia desde el límite con Panamá, por el sur de la costa Pacífica hasta medio río San Juan, norte de los Andes, este hasta el occidente de la Sierra Nevada de Santa Marta; sur hasta el bajo Valle del Cauca; localmente hasta el alto valle del Magdalena y en general el este de los Andes (local en los Llanos) (Hilty & Brown, 1986).

Usualmente se registra hasta los 2100 msnm, pero se tienen registros hasta los 2600 msnm en la Sabana de Bogotá (Asociación Bogotana de Ornitología, 2000).

abstract: El Garrapatero Grande mide aproximadamente 46 cm, tiene ojos prominentes, pico negro comprimido con culmen arqueado en la porción basal. Es delgado con plumaje negro azul lustroso, con lustre verdoso en alas y púrpura en cola larga y redondeada (Hilty & Brown, 1986). Generalmente esta especie es gregaria y acompaña a grandes mamíferos, se encuentra ampliamente distribuida en todas las áreas abiertas con rastrojos y matorrales de los Llanos de la Orinoquia (McNish, 2007); también habita en árboles y matorrales a lo largo de ríos, lagos, pantanos, orillas de lagunas y en manglares (Narosky & Yzurieta, 2010). A menudo realiza vocalizaciones muy ruidosas y gorgoreos guturales (Hilty & Brown, 1986). A pesar que la tendencia de la población parece estar disminuyendo, es una especie común y con un amplio rango de distribución (BirdLife International and NatureServe, 2014).
