identifier: reproductionUnstructured: El macho realiza el cortejo levantando las plumas de la coronilla, vibrando las alas y
cantando; la hembra responde con un reclamo. El macho selecciona el área de anidación pero la hembra es la única que escoge donde construir el nido. Generalmente los nidos son construidos en cavidades de las raíces de árboles (Audubon, 2014; Whitaker & Eaton, 2014). Es una especie monógama. El nido es en forma de tazón construido principalmente de musgos, tallos y hojas de pino, puede tener una puerta de entrada de hojas. Los huevos son depositados a finales de mayo e inicios de junio, entre 4 y 6 huevos blancos manchados de marrón y gris; las hembras incuban los huevos y ambos padres cuidan a los polluelos que salen del nido entre los días 9 y 10. Los juveniles que aún no vuelan se esconden en la vegetación hasta que finalmente emprenden su viaje migratorio (Alderfer et al., 2006; Kaufman, 2005; Sibley, 2000).

feedingUnstructured: Durante su época reproductiva, la Reinita Acuática Norteña se alimenta de insectos, arañas y caracoles que consume principalmente del suelo fangoso y en el follaje y hojas caídas; en primavera es muy común verla alimentándose de las larvas de mariposa (Whitaker & Eaton, 2014), en invierno y en las zonas de migración consume una mayor variedad de alimentos tales como peces pequeños, moluscos, crustáceos que obtiene de la hojarasca y decápodos que se encuentra en la superficie del agua (Asociación Bogotana de Ornitología, 2000; Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010). También consume una gran cantidad de agua, la cual toma del follaje de las plantas y del aire (Whitaker & Eaton, 2014).

behaviorUnstructured: Esta especie prefiere cursos de agua y áreas anegadas, es común observarla caminando por el suelo (Hilty & Brown, 1986). Generalmente es solitaria, camina en las orillas balanceándose hacia adelante y hacia atrás mientras busca pequeños insectos (Asociación Bogotana de Ornitología, 2000; Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010). Durante su migración y en sus zonas de anidación establece territorios para alimentación y descanso, los cuales defiende en ocasiones con violencia (Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010). En las zonas de anidación, su canto es un fuerte suiiii-suiiiii chit-chit wiiiii dliiiuuuu y su llamado un tintineo (Audubon, 2014; Whitaker & Eaton, 2014). En migración es frecuente un reclamo fuerte y metálico chink chink o tsinc muy distintivo (Asociación Bogotana de Ornitología, 2000).

distributionUnstructured: La Reinita Acuática Norteña se reproduce desde el norte y centro de Alaska, norte de los Estados Unidos (Maine y Montana) y sur de Canadá (Nueva Escocia, Ontario y Columbia Británica). Inverna desde Florida (Estados Unidos), las Antillas Mayores y Menores a todos los países de Centroamérica, hasta Colombia, norte de Ecuador, noreste de Perú, gran parte de Venezuela y norte de Guyana, Surinam y Guyana Francesa (Peraza & Moreno, 2012).

Esta especie se distribuye principalmente por debajo de los 2000 msnm; pero se tienen registros visuales hasta los 3000 msnm. En Colombia se le puede encontrar en todas las regiones, con excepción de la zona sur del Amazonas (Asociación Bogotana de Ornitología, 2000; Peraza & Moreno, 2012).
