modified: created: mimeType: dataType: identifier:

habitatUnstructured: Es relativamente común a lo largo de arroyos permanentes, en colinas y montañas, ocasionalmente a orillas de estanques y lagos; principalmente piedemonte y montañas. Generalmente no se encuentra en tierras bajas, donde los ríos no tienen pendiente fuerte (Asociación Bogotana de Ornitología, 2000; Hilty & Brown, 1986). Se posa sobre techo, rocas y cables, pero pocas veces sobre vegetación (Asociación Bogotana de Ornitología, 2000). Es común verlo alrededor de las corrientes de agua, lagos y lagunas del piedemonte llanero (McNish, 2007).

fullDescriptionUnstructured: El Febe Negruzco es distintivo por su color casi negro y su hábitat, nunca se encuentra muy lejos del agua. Los adultos tienen el plumaje completamente negruzco excepto dos barras alares, los márgenes de las secundarias y el centro del abdomen blanco. Pico y patas negros. Los juveniles son más opacos, cafecino; barras alares y vientre teñido con ante opaco (Asociación Bogotana de Ornitología, 2000). briefDescription:

dataType:
identifier:
behaviorUnstructured: Es una especie confiada; se ve a menudo posado en piedras de arroyo o en edificios, cables
y otros lugares expuestos al agua; vuela corto a cazar insectos, usualmente cerca de la superficie del agua o del
suelo y regresa a la percha inicial; también mueve la cola hacia arriba cuando vocaliza (Asociación Bogotana de
Ornitología, 2000; Hilty & Brown, 1986; Narosky & Yzurieta, 2010). También se introduce en los portales de las
viviendas para atrapar los insectos enredados en las telarañas (Alcaldía de Santiago de Cali Departamento
Administrativo de Gestión del Medio Ambiente, 2010).
Emite un piiit brillante y ascendente y otras notas estridentes (Hilty & Brown, 1986) que se escucha al amanecer; e
canto es un fiiilibiiibiiuuuu o puiliibiiibriuuuu con variantes vigoroso y algo quejumbroso (Asociación Bogotana de
Ornitología, 2000; Kaufman, 2005; Sibley, 2000).

distributionUnstructured: Esta especie se distribuye desde el sur de Norteamérica hasta Argentina. En Colombia desde la Sierra Nevada de Santa Marta y Serranía de Perijá, las tres cordilleras y Serranía de la Macarena. Los de tierras altas del este de Panamá y Sudamérica pueden corresponder a una especie distinta Sayornis lairostris (Hilty & Brown, 1986). Es una especie rara en la Sabana de Bogotá, conocida sobre todo en los ríos y quebradas anchas de la cordillera; registrado al lado del río Teusacá, cerca de la Calera, el río Bogotá arriba de Chía y los pozos termales de Tabio (Asociación Bogotana de Ornitología, 2000).

Esta especie se encuentra hasta los 2800 msnm (Asociación Bogotana de Ornitología, 2000).

measurementID:

abstract: El Febe Negruzco mide 19 cm aproximadamente; es una especie inconfundible; enteramente hollín con abdomen blanco; cobertoras alares superiores y anchos márgenes de las rémiges internas blancos; rectrices externas con algo de margen blanco (Hilty & Brown, 1986). En raras ocasiones se encuentra fuera del agua; captura libélulas y otros insectos en el aire, con frecuencia desde una piedra o en medio de una quebrada, o los recoge del piso de cemento. Se introduce en los portales de las viviendas para atrapar los insectos enredados en las telarañas (Alcaldía de Santiago de Cali Departamento Administrativo de Gestión del Medio Ambiente, 2010). Tiene un amplio rango de distribución; la tendencia de la población está en aumento, por lo tanto se encuentra en categoría de Preocupación Menor (BirdLife International, 2012).
